

Counterfeit Parts Policy

LG Motion Ltd. is a designer, manufacturer and installer of specialist motion control and automation systems and the safety of our products is essential to all that we do. With an increasingly complex supply chain we must be diligent in tracking, inspecting and managing parts, material and equipment throughout the supply chain to ensure their authenticity is not compromised.

LG Motion Ltd. understands the growing impact of counterfeit, fraudulent and suspect items may pose on safety, performance and reliability. As such we are committed to establishing relationships, processes and procedures to reduce the risk of using counterfeit parts in our products.

To this end our objectives are:

- Govern the detection, prevention, removal or mitigation of counterfeit fraudulent or suspect parts from the supply chain
- Ensure counterfeit material is appropriately reported
- Continually improve purchasing processes aimed at reducing the risk of procuring counterfeit parts
- Develop a strategic plan to manage long term availability of authentic parts
- Monitor and where appropriate act on industry alerts
- Constantly challenge our external supply chain to meet the same standards as our internal supply chain

We believe that by actively managing the risk of counterfeit parts from entering our products we will live up to our brand promise of being a leading global manufacturer.
